

SAPPORO MEDICAL UNIVERSITY

Aims to be a Hall of Fame for Medical Knowledge.

Sapporo Medical University, whose predecessor was Hokkaido Women's Medical College, was established in 1950 as the first medical university under Japan's new postwar medical university system. At first, there was only the School of Medicine. In April 1993, the School of Health Sciences, consisting of the Department of Nursing, the Department of Physical Therapy and the Department of Occupational Therapy, was established. Then, in April 2007, Sapporo Medical University made a fresh start as a Hokkaido public university corporation. Today, it has grown to become a medical university with approximately 1,500 undergraduate and graduate students and 1,500 teachers in its two schools and four departments.

Check!

We welcome international exchange students from Thailand!

Sapporo Medical University's international exchanges are promoted mainly by the Committee for International Affairs and Medical Exchanges and the Department of International Affairs and Medical Exchanges. The Department of International Affairs and Medical Exchanges is positioned as an administrative body to implement affairs related to international exchanges.

If you are a medical student and interested in coming to SMU for a learning experience either in Basic Medical Sciences or Clinical Sciences, please email us.

For formal application, a resume, a letter of recommendation from the Dean of your medical school, a health certificate (including your immunization record) and some additional documents are necessary. Please contact us at:

Sapporo Medical University campus will be renewed.

Sapporo Medical University is establishing new university facilities to provide a quality educational environment to meet the changing times and an environment where students can study voluntarily, improve research and other facilities, and secure open spaces for interchanges among students.
